Chapter 1, page 1

Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back. A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs.

The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control.

Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions.

Long documents test the page selector: jump to the last page, then type a page number to come back. Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently.

This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back. A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces.

Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding.

Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back.

A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page.

Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently.

Chapter 4, page 36

Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding.

Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back.

A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page.

A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position.

Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area.

Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back. A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs.

Chapter 5, page 48

A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces.

Chapter 8, page 71

Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back. A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs.

The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control.

Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions.

Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page.

Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently.

This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back. A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces.

Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding.

Chapter 9, page 83

Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding.

Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back.

A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page.

Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently.

Every redraw then replays the recording, scaled and offset for the current zoom and scroll position.

Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area.

Chapter 11, page 106

Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control. Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding.

Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions. Long documents test the page selector: jump to the last page, then type a page number to come back.

A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position. Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page.

Pinch to zoom around your fingers, drag to move the page, and double-tap to return to the whole page. Fonts are embedded in the document or supplied by the font library that ships with the control.

Images arrive compressed with JPEG, JPEG 2000, JBIG2, CCITT fax or plain Flate encoding. Tiling patterns repeat a small cell across a shape, while shadings blend colours smoothly over an area. Optional content lets one page carry layers that a reader can show or hide independently. This text is generated, so the sample carries no third-party content and no licensing questions.

Long documents test the page selector: jump to the last page, then type a page number to come back. A PDF page is a program: a content stream of operators that move a pen, set colours and show glyphs. The viewer interprets that program once and records the drawing commands it produces. Every redraw then replays the recording, scaled and offset for the current zoom and scroll position.
